

VENKAT PENUMARTHI

Power Platform Developer | Data Automation Specialist | Azure Integration Expert

kapardhisarma@gmail.com | +1 (672) 833-7996 | Abbotsford, BC, Canada

PROFESSIONAL SUMMARY

Microsoft Certified Power Platform Developer with 10+ years of experience in program data management, automation, and business intelligence. Expert in data governance, multi-system reconciliation, and building intuitive Power Platform solutions (Power Apps, Power Automate, Power BI) that transform complex datasets into trusted decision-making tools. Proven track record stewarding enterprise data across Project Controls, Supply Chain, ERP systems, and spatial data platforms. Skilled in automating workflows, designing user-centric interfaces, and partnering with cross-functional teams to align data, tools, and automation with execution priorities. Strong background in Azure integration services, API development, and implementing data quality frameworks.

CERTIFICATIONS

- Microsoft Certified: Power Platform Developer Associate (PL-400)
- Microsoft Certified: Power BI Data Analyst Associate (PL-300)

CORE COMPETENCIES

- Data Governance & Stewardship: Authoritative data source management, field definition, validation frameworks, data quality reconciliation
- Power Platform Solutions: Power Apps (Canvas & Model-Driven), Power Automate, Power BI, Dataverse, Power Pages, UI/UX design
- Data Integration & ETL: Azure Data Factory, Python/SQL data pipelines, multi-system reconciliation, data transformation
- Enterprise Systems: Power BI data models, SharePoint, GIS (ArcGIS), Oracle, ServiceNow, Project Controls systems
- Azure Integration: Azure Functions, Logic Apps, API Management, Service Bus, Data Factory, Hybrid Worker, Self-Hosted Integration Runtime
- API Development: REST APIs, Custom HTTPS endpoints, Custom Connectors, secure authentication, scalable API design
- Automation & AI: Intelligent workflows, Copilot Studio, workflow orchestration
- Development & Tools: JavaScript, TypeScript, Python, SQL, GitHub, Azure DevOps, CI/CD Pipelines
- Analytics & Reporting: Power BI (DAX, Power Query, data modeling), Excel Power Query, paginated reports, embedded analytics
- Agile & Collaboration: Technical documentation, stakeholder alignment, cross-functional partnership, agile methodologies

PROFESSIONAL EXPERIENCE

Tech Lead – Power Platform & Azure Data Integration | Enbridge Inc., Canada | May 2025 – Present

- Design and build Power Platform solutions (10+ apps) with strong UI/UX principles to streamline data entry, validation, and confirmation at the source, reducing manual processing time by 60%
- Develop Azure Data Factory pipelines for ETL workflows, orchestrating data movement and transformation across multiple enterprise systems
- Build custom HTTPS endpoints and REST APIs using Azure Functions and API Management for secure, scalable integration with external systems
- Partner with Project Managers and Business Owners to align data structures, automation tools, and workflows with execution sequencing, constraints, and priorities
- Create advanced Power BI solutions with complex data models, DAX measures, and Power Query transformations, reviewing data model dependencies and optimizing report performance for portfolio-level decision-making
- Engineer Python ETL scripts deployed via GitHub Actions to ingest and transform procurement data, leveraging Parquet format to optimize Power BI performance and enable faster insights
- Develop model-driven and canvas PowerApps with Dataverse entities, custom business rules, automated approvals via Teams Adaptive Cards, and role-based security for intake and triage workflows
- Contributed to Power Platform Center of Excellence (CoE) initiatives including DLP policies, environment strategies, governance frameworks, and adoption best practices
- Create comprehensive technical documentation including solution architecture diagrams, data mapping specifications, API documentation, and deployment guides following agile methodologies

Sr. Business Application Specialist | RDH Building Science, Vancouver, BC | *Oct 2023 – May 2025*

- Led full-lifecycle Power Platform development including requirements gathering, solution design, development, testing, and deployment across 20+ projects supporting business operations and data management
- Designed scalable Dataverse data models with complex entity relationships, calculated fields, and rollup columns to support enterprise workflows and reporting requirements
- Configured Azure Hybrid Worker and Self-Hosted Integration Runtime for secure, on-premises data connectivity, enabling seamless integration between cloud services and internal databases while maintaining data governance and security compliance
- Built intake forms using canvas apps with advanced validation, conditional logic, file attachments, and multi-step workflows, streamlining request submission and approval processes
- Created triage dashboards using model-driven apps with custom views, charts, quick create forms, and business process flows for efficient case management and prioritization
- Integrated Azure Logic Apps with Dataverse using event-driven patterns, custom API connectors, and secure OAuth authentication for automated data synchronization
- Developed Power Pages portals for external stakeholder collaboration with custom forms, filtered list views, and role-based permissions ensuring secure data access
- Implemented Copilot Agents models for sentiment analysis, reducing manual data entry by 70% and improving processing accuracy
- Built advanced Power BI dashboards with complex DAX measures, consuming data from Dataverse, SharePoint, SQL Server, and Excel sources with optimized data refresh strategies
- Established CI/CD pipelines using GitHub Actions for automated solution deployment across development, test, and production environments, ensuring version control and rollback capabilities

- Provided technical support, troubleshooting, and knowledge transfer to business users, maintaining 99.9% application uptime and user satisfaction

Power Platform Developer | Novo Nordisk India, Bangalore | *Sep 2021 – Apr 2023*

- Delivered 12+ PowerApps, Power Automate, and Dataverse solutions for Quality and Procurement departments with focus on compliance, traceability, and data accuracy
- Integrated Microsoft Dynamics CRM with Power Platform via custom APIs and plugins, automating cross-functional business processes and data synchronization workflows
- Developed RPA bots to extract data from legacy Oracle systems and write to SQL Database, integrated with Power Automate workflows for end-to-end automation
- Managed solution lifecycle from development through UAT to production using segmented deployments and Azure DevOps pipelines
- Built Power BI solutions with drill-through capabilities, row-level security, and incremental refresh for supply chain analytics and operational reporting
- Created SSIS packages for ETL data movement supporting real-time reporting and analytics workloads across multiple data sources
- Established Power Platform Center of Excellence and conducted adoption workshops, increasing platform usage by 300% and driving digital transformation
- Authored technical design documents and solution architecture artifacts following agile sprint methodologies and best practices

Senior Developer (Project Lead) | Cognizant Technology Services, Bangalore | *Aug 2020 – Sep 2021*

- Managed team of 4 developers delivering PowerApps and Power Automate solutions using Excel, SQL, and Dataverse as data sources for enterprise clients
- Designed and implemented Power Apps with complex business logic, multi-step forms, conditional visibility, and integration with external REST APIs
- Developed advanced Power BI reports on Dynamics CRM data with custom visuals, interactive drill-down capabilities, and optimized data models
- Applied DLP policies and environment security controls to safeguard sensitive client data across Power Platform solutions and ensure compliance
- Led SharePoint and Microsoft Project migration from On-Premise to Online for Medtronic, managing data migration, user adoption, and change management

Senior IT Developer | Medtronic India Pvt. Ltd., Bangalore | *Aug 2017 – Aug 2020*

- Pioneered Power Platform implementation, automating 9 manual procurement and project management activities, earning MVP and CIO Award for innovation
- Built PowerApps and Power Automate solutions that reduced manual processing time by 80% and eliminated data entry errors across procurement workflows
- Developed Power BI reports with custom DAX measures consuming data from Project Online, SharePoint, and SQL Server for executive dashboards
- Created Microsoft Teams integration with Project Online and ServiceNow to streamline project initiation workflows and approval processes

- Managed SharePoint and Project Server infrastructure including updates, performance optimization, backup/recovery, and issue resolution

EDUCATION

MBA, Marketing – Magnus School of Business

Bachelor of Arts, Accounting – A.V. College of Arts, Science & Commerce
